Cement, Concrete, and Aggregates
Table of Contents
Volume 16, 1994

No. 1, June

Influence of Sulfate Ions on Chloride-Induced Reinforcement Corrosion in Portland and Blended Cement Concretes—O. S. B. AL-AMOUDI, RASHEEDUZZAFAR, M. MASLEHUDDIN, AND S. N. ABDULJAUWAD 3
Use of High Volumes of Class C and Class F Fly Ash in Concrete—T. R. NAIK, B. W. RAMME, AND J. H. TEWS 12
Strength Measurement of Concrete Using Different Cylinder Sizes: A Statistical Analysis—R. L. DAY 21
Accelerated Sulfate Attack on Concrete in a Hot Climate—F. F. WAFA 31
Construction Materials Made with Coal Combustion By-Products—L. WEI, T. R. NAIK, AND D. M. GOLDEN 36
Hexavalent Chromium in Portland Cement—W. A. KLEMM 43
Effect of Curing on Shrinkage and Expansion of Surface Repair Mortars—B. DURAND AND J. MIRZA 48
Rapid Chloride Permeability Testing of Silica-Fume Concrete—C. OZYILDIRIM 53
Effect of Elevated Curing Temperature on the Chloride Permeability of High-Strength Lightweight Concrete—O. E. GJØRV, K. TAN, AND P. J. M. MONTEIRO 57
Limits of Application of the ASTM C 227 Mortar Bar Test. Comparison with Two Other Standards on Alkali Aggregate Reactivity—R. RANC, H. ISABELLE, J. Y. CLÉMENT, AND D. SORRENTINO 63
A New Nondestructive Testing (NDT) Torsion Test to Evaluate Compressive Strength in Concrete Structures—A. A. DI MAIO AND L. P. TRAVERSA 73
Technical Note: Use of Control Specimens in Freezing and Thawing Testing of Concrete—J. H. RUTHERFORD, B. W. LANGAN, AND M. A. WARD 78

No. 2, December

Calorimetric Study of Cement Blends Containing Fly Ash, Silica Fume, and Slag at Elevated Temperatures—W. MA, D. SAMPLE, R. MARTIN, AND P. W. BROWN 93
Laboratory Measurements of Corrosion Activity of Steel Reinforcement in Concrete Using Simple Equipment—P. WROBEL 100
Proportioning of Fly Ash Cement Concrete Mixes—S. G. SHASHIPRAKASH, T. S. NAGARAJ, S. RAVIRAJ, AND B. V. YENAGI 104
Crack Counts in Air-Entrained and Non-Air-Entrained Concrete Subjected to Accelerated Fog-Room Curing—J. E. GILLOTT AND B. CZARNECKI 110
Optimization of the Composition of a High-Performance Concrete—P. ROUGERON AND P.-C. AÏTCIN 115
Determination of Water Content of Fresh Concrete Using a Microwave Oven—M. NAGI AND D. WHITING 125
The Effects of Different Cementing Materials and Curing on Concrete Scaling—I. AFRANI AND C. ROGERS 132
The Influence of Size and Hardness of Sand Particles and Their Proportions on the Friction Characteristics of Cement Mortars: A Laboratory Study—S. KOLIAS 140
Mineral Admixtures Contribution to the Development of Heat of Hydration and Strength—V. F. RAHHAL AND O. R. BATIC 150
The Effect of Mold Size and Mold Material on Compressive Strength Measurement Using Concrete Cylinders—R. L. DAY 159
Cement Strength Variations: Defining the Solution—R. F. GEBHARDT 167
Effect of Capping Materials and Procedures on the Measured Compressive Strength of High-Strength Concrete—C. L. LOBO, G. M. MULLINGS, AND R. D. GAYNOR 173
Technical Note: Strength Evaluation of *In-Situ* Concrete by Rebound Hammer and Core Testing—M. A. WARD AND B. W. LANGAN 181
Book Reviews 186
Testing Forum 189
Index 195
